Types of Implants

Zimmer TaperedScrewVent:

- Swiss-American,
- 30 years' experience,
- can be loaded immediately,
- cost is proportional to its value
- microtexture surface,
- internal hexagon connection between the implant and abutment provides an enhanced sense of engagement and the best solution for minimizing micro-movements
- there are three different screw-threads on the surface of the implant for the best stabilization
- according to the latest results in dental research, the most appropriate implant model

Nobel Replace:

- Swedish,
- 40 years' experience,
- the most versatile system with wide range of abutments,
- TiUnit[®] biomaterial surface which actively participates in its integration with human bone.
- 8mm implant option
- Standardized easy drilling protocol
- Completely color-coded
- Always high initial stability due to root shape
- For narrow spaces between remaining roots
- Internal connection

Zimmer SwissPlus:

- Swiss-American,
- good value for suitable price,
- innovative system,
- microtexture surface for greater bone-to-implant contact.

Alpha Bio Tec:

- tapered implant with variable thread design
- tapered design allows the implant to be placed in the ideal position for improved aesthetics and better load distribution
- better control during placement
- greater initial placement stability

- 20 years' experience
- Israeli - Swedish
