

**QUALITY PLANT**  
DENTAL IMPLANTATION **10** YEARS GUARANTEE

### **Implant centre in Szekszárd**

In the waiting hall of our implant centre in Szekszárd, a pleasant atmosphere will welcome you with soft music and green plants, with small tropical fish swimming in the reception-desk's aquarium. Huge windows facing the garden may evoke the feeling that you have just come to visit a friend.

Our five-seat dental clinic is among the few Hungarian medical centres that owns every kind of advanced dental technology equipment available across the world. The second CEREC3 device ever in Hungary was commissioned at our practice in 2005. With this system, prostheses are designed by computer and precisely carved out from a block of aesthetic ceramic. An ORTOPHOS XG plus Digital panoramic X-Ray, an Elexxion (computer-controlled laser device) and CEREC inLAB the CAD/CAM robot apparatus for the dental technician using the latest metal-free technologies are also available.

We are determined to satisfy your high expectations with attractive and long-lasting results, but there is something more important that we also offer our patients: a friendly and hygienic environment as well as the expertise and kindness of our English speaking team of ten outstanding professionals.

Our unique international references, the trust of the patients that visit us from both Hungary and the five continents of the world impose on us a singular responsibility and oblige us to do a perfect job and to continue life-long learning.
